
1
RCD entity
(biological / ontological classification)
MC1–MC5
Modality criteria
(machinery, trigger, morphology, nomenclature, distinguishability)
Q1–Q13
Evidence checklist
BG0–BG6
Biological Gates
L1–L5
Final ontological level
Complementary descriptors:
evidence_maturity
species_scope
relationship_type
parent_entity
Goal:
Determine what the entity is biologically.
2
Gene–RCD association
Sources & validation
(curation, literature, databases)
ET1–ET4
Evidence Tier
CT1–CT4
or confidence_score
Mechanistic role & direction
(EXECUTOR, REGULATOR, MARKER; positive / negative / mixed)
Goal:
Rate strength and type of gene–RCD association.
3
Pipeline quality
EG1–EG5
Elicit Governance Gates
Input validation
Allow-list compliance
Vocabulary compliance
EXECUTOR precision
Traceability
Goal:
Assess the reliability of automated extraction.
Key message
Three distinct objects are being evaluated:
(A) the RCD entity; (B) the gene–RCD association; (C) pipeline quality.
